SUMMARY

Computer Science (AI/ML) graduate with hands-on experience building and evaluating machine learning and deep learning models:

AI/ML	NLP	Computer Vision
Model building & evaluation	Text processing, language models	Image-based deep learning
Graph-Based Architectures	LLMs & RAG	Vector Databases
Agentic AI	Experimentation & Testing	Full-Stack Development
Multi-step/tool-using AI workflows	A/B testing, automated ML pipelines	Production-ready feature delivery

SKILLS

AI / ML: NLP, Deep Learning, CNNs & GNNs, Generative Models, Speech Recognition,scikit-learn, PyTorch, Tensorflow
Scripting and Databases: Python, C, C++, Java, JavaScript, HTML, CSS, Bootstrap, jQuery, WordPress, Shopify | MySQL, SQL, PostgreSQL, PHP | Git, GitHub, CI/CD, VS Code, Eclipse, RStudio, JIRA, MS Office
Cloud: Microsoft Azure (ML , blob storage, OpenAI service)

EXPERIENCE

Front-End Developer | *VMG Software Solutions* Feb 2026 – Jun 2026

- Delivered multiple client projects on WordPress and Shopify using HTML, CSS, JavaScript, and jQuery, contributing to polished digital experiences and faster feature turnaround.
- Optimized page structure and content workflows to improve maintainability and align interfaces with business and customer requirements.

Web Development Intern | *Shri Om InfoTech* May 2025 – Jul 2025 | On-site

- Built responsive web pages with HTML and Bootstrap, improving usability across devices and reinforcing front-end development practices.
- Collaborated on UI layout refinement and cross-browser testing, reducing rendering issues and improving page consistency for production-ready delivery.

Software Development & Automation Intern | *Uniconverge Technologies* Apr 2025 – May 2025 | Remote

- Developed 4 applied AI projects — text summarization, speech recognition, neural style transfer, and a generative text model — using Python, demonstrating practical ML and automation skill.

Data Science & Machine Learning Intern | *Uniconverge Technologies* Apr 2024 – Jun 2024 | Remote

- Engineered a smart traffic pattern analysis pipeline in Python and C using ML and data science methods, improving feature extraction and model experimentation for data-driven decision support.

PROJECTS

Code Vulnerability Detection — CNN-GNN Hybrid Model | *CodeBERT, Graph Neural Networks, Python*

- Built a hybrid deep learning pipeline combining CodeBERT with a heterogeneous graph neural network to automate static vulnerability detection in C/C++ source code.
- Structured model inputs, evaluation logic, and testing checkpoints to improve reliability in detecting high-risk code patterns.

Plant Health Monitoring | *IoT, Deep Learning, Python*

- Designed an IoT and deep learning prototype to monitor plant health signals, supporting automated classification and data analytics for precision agriculture.

Fake News Detection | *NLP, Python, Machine Learning*

- Implemented an NLP-based classification model for news content using text preprocessing, feature extraction, and machine learning for content validation.

AI in the 21st Century: Trends, Challenges & Future Prospects | *Research*

- Analyzed generative AI, deep learning, ethics, and bias to map innovation trends, technical challenges, and future opportunities for AI adoption in data-driven organizations.

Electricity Bill System | *MySQL, PHP*

- Developed a billing system to store and retrieve customer records, reinforcing database design, SQL queries, and transactional data handling.

EDUCATION

Karnavati University | *UnitedWorld School of Computational Intelligence* July 2022 – May 2026
B.Tech, Computer Science & Engineering — AI/ML | CGPA: 7.3
